

Patient Transfer Board

Roller-Free Roller Board: Better For Patients, Easier On Nurses, and Inexpensive

The Patient Transfer Board is a lightweight device designed to make lateral patient transfer safer for operating theatre staff, and more comfortable for the patient. Its unique design is more comfortable for patients than traditional metal roller boards because of its soft foam core. It is also lightweight, for easy transportability and storage. In addition, patient transfer boards are available in three sizes to accommodate different patient transfer needs in the operating theatre.

Ideal For Use With...

- Patients transfer from operating tables to stretchers and trolleys.
- Patients transfer from stretchers and trolleys to hospital beds.

About The Product...

The new Patient Transfer Boards use smooth, low friction surfaces to eliminate the need for hard metal rollers. The transfer board is lightweight, for easy handling, and patient comfort. The device enables patient transfer in the seated or Fowler position. All boards have a built-in strap for easy storage and transport. The Patient Transfer Boards provide all of these advantages without requiring any change to transferring techniques used with traditional metal roller boards.

Key Features & Benefits

- No Rollers - Less traumatic transfer for patients
- Comfortable - Soft, sturdy board is easy on patients
- Lightweight - No lifting required, even with your heaviest patients
- Simple - Uses same or similar transfer technique as those used with metal roller boards
- Fowler Position Transfer - Long board allows for transfer in seated position
- Foldable - Long board folds for easy storage and set-up
- Strap - Carry this lightweight device on your shoulder and keep your hands free
- Resilient and Sturdy - Durable material protects against end cap breakage
